

Smart Link Manager & Attribution System

Outstanding Requirements Checklist

Version 1.0 | 10 September 2026 | Information required before development can begin

Purpose

The four project documents — the PRD, the TRD, the Backend Database Schema and the UI/UX Developer Handoff — each state that no external integration, publisher permission or provider capability may be assumed. This checklist collects every one of those outstanding items into a single list so they can be answered in one pass.

Each row below is quoted word-for-word from the project documents, with its source shown. Nothing has been added, softened or interpreted. Where the same requirement appears in more than one document, the fullest wording is quoted and all sources are cited. The section grouping, the reference numbers and the response column are presentational only.

Standing conditions stated across all four documents

“It does not assume that any external API or publisher capability already exists.” PRD §3

“No external integration is considered available until verified.” TRD §18

“All integrations are proposed until provider documentation and access are verified.” Backend Schema §1

“No integration is represented as already available.” Backend Schema §10

“Actual provider endpoints and payloads must be confirmed from documentation.” TRD §6

“Final API fields and provider capabilities must be confirmed before production implementation.” UI/UX Handoff §15

How to complete this checklist

For each row, record either the answer itself, a link or attachment reference for the documentation requested, or the name of the person who owns it and the date it is expected. Items that cannot be answered should be marked as such rather than left blank — an unanswered item and an unavailable one have very different consequences for the build.

A Domain, Hosting & Infrastructure

Ref	Requirement — quoted from the documents	Source	Your response
A1	“Confirm DNS, hosting, backend infrastructure and domain ownership.”	PRD §16; TRD §18; Schema §10	
A2	“Final stack depends on existing infrastructure.” “Final stack depends on infrastructure and verified integration requirements.”	TRD §2; PRD §12	
A3	“expected traffic volume”	TRD §18	
A4	“Define SLO targets before launch; proposed targets are 99.9% monthly redirect availability and p95 redirect processing under 300 ms excluding external destination latency.”	TRD §15	
A5	“budget and infrastructure ownership”	TRD §18	

B Website & Registration Platform

Ref	Requirement — quoted from the documents	Source	Your response
B1	"Obtain website registration flow and authorized registration API/webhook documentation."	PRD §16; TRD §18; Schema §10	
B2	"existing website and registration technology"	TRD §18	
B3	"The website must preserve attribution through the authorized registration process, subject to consent and technical support."	PRD §6	
B4	"Registration success requires an actual external user ID and completed account creation."	TRD §9	
B5	"Registration and FTD must originate from authorized APIs, webhooks or verified imports."	PRD §8	

C Deposits, FTD & Financial Definitions

Ref	Requirement — quoted from the documents	Source	Your response
C1	"Obtain authorized transaction API and exact FTD eligibility definitions."	PRD §16	
C2	"Confirm the platform's genuine deposit and first-deposit definitions."	PRD §8	
C3	"FTD requires the first genuine completed deposit for the user, with pending, failed, reversed and promotional credits excluded according to confirmed source rules."	TRD §9; PRD §8	
C4	"Confirm campaign cost import process and financial definitions before ROI reporting."	PRD §16	
C5	"ROAS / ROI — Only after revenue, cost and accounting definitions are approved" "deposits are not automatically revenue or profit"	TRD §11; PRD §10	

D WhatsApp / Interakt Integration

Ref	Requirement — quoted from the documents	Source	Your response
D1	"Review Interakt webhook documentation, payload samples and supported campaign-reference matching."	PRD §16; PRD §7; Schema §10	
D2	"Verify Interakt webhook availability, payload schema, contact identifiers, prefilled-message behavior and campaign-reference support."	TRD §8	

Ref	Requirement — quoted from the documents	Source	Your response
D3	“A unique campaign reference in an approved prefilled message may support attribution, but exact Click ID recovery must be tested. If unavailable, mark attribution as campaign-level, estimated or unknown.” “Never assume the click_id is returned automatically.”	PRD §7; TRD §8	
D4	“WhatsApp opens are measurable only when supported by an observable event; otherwise report redirect clicks as a separate proxy.”	PRD §6	
D5	“Webhooks require provider-specific authentication/signature verification where supported, replay protection, idempotency and schema validation.”	TRD §6	

E Publisher Permissions & Reporting

Ref	Requirement — quoted from the documents	Source	Your response
E1	“Confirm whether each publisher permits the tracking URL, website/WhatsApp destination, click macros, third-party trackers, pixels/scripts, conversion postbacks and destination changes.”	PRD §11	
E2	“Collect publisher tracking macros, reporting specifications and destination approvals.”	PRD §16; TRD §18; Schema §10	
E3	“Record publisher approval evidence, permitted destination types, tracking macros, scripts/tags, postback rules, creative specifications and destination-change requirements.”	TRD §13	
E4	“If the campaign category or destination is prohibited, mark it ineligible.”	TRD §13	
E5	“Ingest publisher impressions, clicks and spend when available, with reconciliation and discrepancy reporting.”	PRD §11	
E6	“Never assume a macro, script or postback is supported.” “Only enable capabilities explicitly approved by the publisher.” “No publisher approval is assumed.”	PRD §11; TRD §13; UI/UX §5	

F Attribution Model & Matching Rules

Ref	Requirement — quoted from the documents	Source	Your response
F1	“Agree attribution model, lookback window, lead deduplication rules and privacy/retention policy.”	PRD §16; TRD §18; Schema §10	
F2	“Default proposed model: first eligible acquisition click within a configurable 30-day window, subject to business approval.”	TRD §10	

Ref	Requirement — quoted from the documents	Source	Your response
F3	“Define cross-device limitations, existing-user handling, attribution expiration and re-attribution rules before launch.” “Define first-click/last-click rules and attribution windows before launch.”	TRD §10; Schema §4	
F4	“document the selected first-click/last-click model, lookback window, cross-device limitations and handling of unmatched users”	PRD §8	
F5	“Deduplicate provider event IDs and unique leads by the agreed contact identity and reporting window.”	TRD §8	
F6	“Match registrations through authorized identifiers; do not use phone number alone as proof of a click.”	Schema §4	

G Privacy, Legal & Compliance

Ref	Requirement — quoted from the documents	Source	Your response
G1	“Review applicable Indian law and publisher/platform rules before launch.”	PRD §13	
G2	“Complete legal/privacy review of applicable Indian requirements, consent notices and data-processing agreements before production.”	TRD §14	
G3	“Minimize and protect phone/IP data; define consent, retention, deletion and access policies.”	PRD §13	
G4	“reporting retention” “define retention/deletion schedules”	TRD §18; TRD §14	
G5	“No cloaking, misrepresentation, unauthorized redirects or restriction bypass.”	PRD §13	
G6	“written business/compliance approval”	TRD §19	

Completion record

Development scheduling depends on the items above. Sections D, E and F in particular determine what the system is able to report, and are best answered before Phase 2 work begins.

Completed by	Role	Date	Outstanding items

Prepared as a companion to the BetIndia Smart Link Manager PRD v1.0, TRD v1.0, Backend Database Schema v1.0 and UI/UX Developer Handoff v1.0, all dated 9 September 2026.
